Description

2/2-way solenoid valve of nominal diameter DN 8 for liquid dispense. This valve is direct controlled and normally closed (NC).

Valves of this design are medium separated seat valves, where the plunger is separated by a diaphragm from the medium. Valve bodies can directly be connected. The valve outlet nozzle is removable.

This valve can be manufactured with a variety of customised connections in DC or AC voltage. Low power or PPM triggering can be used.

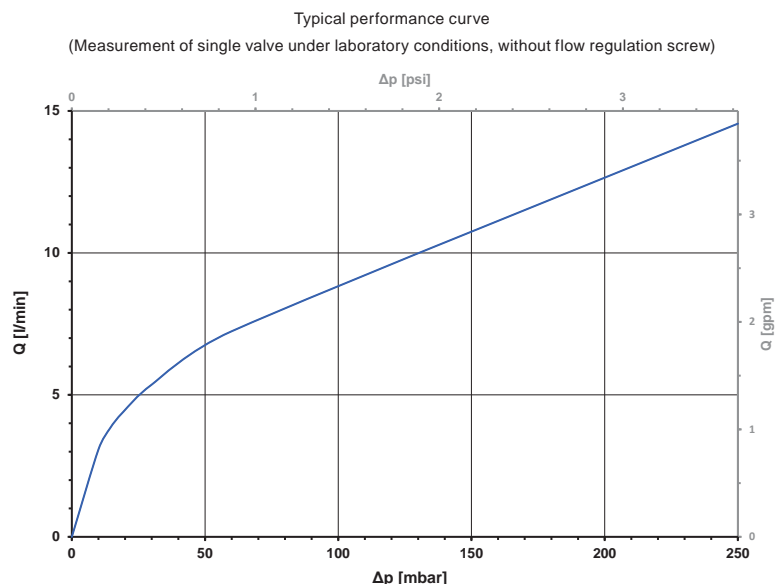

Electrical operating safety is achieved by PBT coating of the coil and can be supported by an additional protection circuit.

The valve is distinguished primarily by its food grade and hot water capability.
